

# EPICOL INJ LV

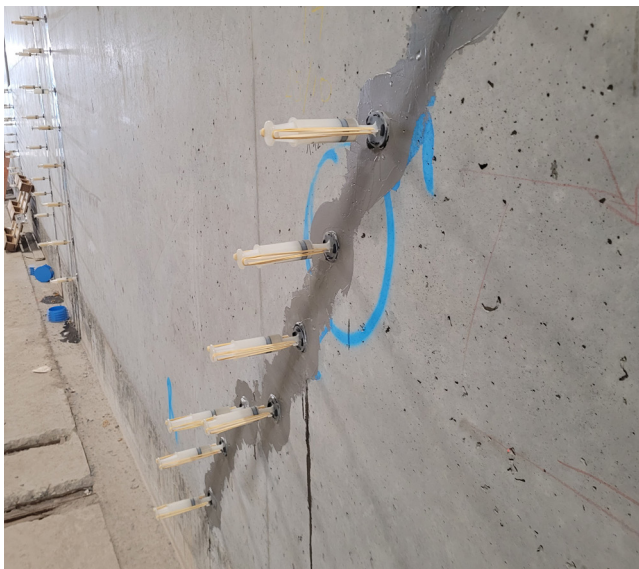

LOW-VISCOSITY EPOXY RESIN FOR CONCRETE INJECTION

## BENEFITS

- (Ultra) low-viscosity with deep penetration into micro cracks
- Solvent-free
- Long processing time or pot-life
- Simple mixing ratio
- Deep penetration in micro cracks
- Excellent adhesion to concrete, also for humid substrate
- Good chemical resistance
- Excellent mechanical strength
- Minimal shrinkage

## FIELD OF APPLICATION

For structural repair of:

Residential, industrial and civil structures or structural elements, such as floors, walls, beams, columns, bridge and parking decks, and water retaining structures.

EPICOL INJ LV can be used as glue for bonding and anchoring. The bonding of steel sheet lining / cladding for concrete is possible by low pressure injection.
